Weber Saint-Gobain Byggevarer AS - Use of Weber.floor 4716 Primer

To whom it may concern

DNV have issued several EC Type Examination Certificates to Weber Saint-Gobain Byggevarer AS for Class A divisions and primary deck coverings. Each product is meant to be fitted on steel deck and the products have been tested according to required IMO standard.

For some of the products Weber Saint-Gobain Byggevarer AS use Weber.floor 4716 Primer on the steel deck before they fit the actual primary deck covering etc. on the deck. When the products have been tested they have been tested according to IMO FTPC Part 6 , referring to Part 5 item 3.2.2, stating that if the product has a multilayer construction the test to be conducted for combination of all layers.

It is further stated in IMO FTPC Part 5 item 3.2.2 that primer or similar thin film of paint on deck plating need not to comply with the above requirements of Part 6.

Based on the above, and as long as Weber.floor 4716 Primer is used together with other products, we are of the opinion that the primer need not to be tested separately.

Yours faithfully
for DET NORSKE VERITAS AS
